The use of nanotechnology as an approach for essential oil

The past decade has proven the competence of nanotechnology in almost all known fields. The evolution of nanotechnology today in the area of the food industry has been largely and has had a lot of contribution in the food processing, food package, and food preservation.

The intertwine of nanotechnology with the food industry

In this intensive four day course, you will use many advanced features of the Empower chromatography software. The emphasis is on organizing, acquiring, processing and reporting chromatographic data.

where BA is the oral bioavailability of bioactive compounds, B* is bioaccessibility, A* is absorption, and T* is molecular transformation. Thus, in order to maximize the bioavailability of bioactives, one can improve the bioaccessibility and absorption, and alter the molecular structure that might have occurred during digestion.

HPLC is the most commonly used method to identify the isolated compounds in phytochemistry. So how can we choose the solvent for an unknown fraction.

What are the different types of solvents used in HPLC?
